

- Prints Receipts in Less than a Second
- Quiet
- Lower Operating Cost than Ink or Dot Matrix
- Customizable Receipts
- Saves Valuable Countertop Space

Space-Saving. Cost-Reducing. Proven.

It takes several devices to run a teller station – computers, scanners, printers, card readers, PIN pads, and whatever else you might need for your particular branches. Digital Check is helping to bring those functions together, with a modular add-on receipt printer for the TS240 without taking up extra space on the countertop.

Thermal Printing – Not Dot Matrix or Inkjet

Our TS240 TTP thermal printer uses the latest in thermal technology, improving speed over traditional printing with a lower cost of ownership. For more about how thermal printers measure up against inkjet and dot matrix devices, see our detailed comparison on the back.

Fast, Quiet, and Low-Maintenance

Most receipts print out in less than a second, with none of the noise of dot matrix printing. With no ribbons or ink cartridges, and few moving parts, the TS240 TTP has been tested to last for over 1.75 million prints. The only thing you need to change is the paper.

Print Custom Receipts

The TS240 TTP receipts can be customized using standard text, images, and a full range of design elements. Utilize the complimentary ReceiptWaresm software to add your logo, watermarks, as well as personalized marketing messages to each receipt.

Uses Standard Supplies

No special proprietary paper or parts are needed – the TS240 TTP uses standard thermal paper rolls that actually cost less than plain receipt paper. There are no ribbons or cartridges to replace.

Digital Check Reliability

Like every product that Digital Check offers, the TellerScan Transaction Printer comes with the same reputation of reliability as every other product in our line. Each TTP comes with a three year warranty, so you can rest assured that should the unlikely event occur in which you need service – you're covered. This is why Digital Check is The Secure Choice[®].

Thermal Printing: Faster and Less Expensive than Using Inkjet or Dot Matrix

With conventional printers, it's expected that every once in a while, you'll have to replace "consumables" such as ink cartridges, printer ribbons as well as paper. Individually, the cost isn't a lot, but over time it adds up. How much could you expect to spend on ink at a typical bank branch?

The lifespan of ribbons and ink cartridges for receipt printers is measured in millions of printed characters, with an average ribbon lasting for about 3 million and an ink cartridge anywhere from 7 million to 20 million depending on its size. A typical bank receipt might have 300-400 characters. Therefore, you can expect a ribbon to last for at most 10,000 receipts, and a cartridge somewhere between 20,000-50,000.

A bank branch typically deals with a couple hundred customers per day, and prints twice that many receipts. That means a ribbon might last a month, and an ink cartridge would need to be replaced every three months on average. At \$3 per ribbon, or \$20-\$40 for a cartridge, that adds up to as much or more than the device's purchase price over its lifespan. The table on the right is intended to simulate costs for a single branch, a mid-sized community bank of about 20 branches, and a regional bank of 200 branches.

Thermal printers do not use inkjet cartridges or ribbons and require only the thermal roll paper itself, which costs about the same as regular paper. Over time, it's an investment well worth making.

Yearly Cost of Consumables

Receipts Per Day	Dot Matrix Printer	Inkjet Printer	TS240 TTP
500	\$40	\$125	\$0
10,000	\$800	\$2,500	\$0
100,000	\$8,000	\$25,000	\$0

Faster and Quieter than Other Types of Printers

An average dot matrix receipt printer operates at 5-6 lines per second, or about 1.5 vertical inches. Inkjet printers are faster, typically managing 12-14 lines per second.

Thermal printers are in a whole different class, running at 40 lines or more per second – about 10 inches of vertical type. Most of your receipts will be finished in one second or less.

Thermal printers also have the lowest noise output of any style printer on the market.

PRODUCT SPECIFICATIONS

Size (Combined with TS240 - TS240 sold separately)

H: 11.25" (28.57 cm) W: 5.74" (14.57 cm) L: 15.35" (38.98 cm)
Weight: 8.10 lbs. (3.67 kg)

Print

Method: Direct Thermal
Color: Monochrome
Speed: (Monochrome) 9.84" (25 cm) per second
Resolution: 203 dpi
Cutting Knife: Ceramic, Rotary
Receipt Columns: 44-56

Standard Media

Paper Roll Diameter: 3.15" x 3.27" (80mm x 83mm)
Other Paper Widths: 2.28" (58 mm), 2.36" (60 mm), 3.24" (82.5 mm)
Paper Status Indicator: Out and Low

Built-in Memory

RAM: 512 KB
Flash: 4 MB

Connectivity

Standard USB 2.0 cable and power supply included

Standard Warranty

3 year warranty

Product Life

Printlines: 60 million
Knife Cuts: 1.75 million

Electrical

Power Consumption: 55 Watts
Input Voltage: 100 to 240 VAC, 50/60 Hz
Separate Standard Power Supply: Auto sensing for voltage

Environmental

Operating Temperature: 60° - 90° F (15° - 32° C)
Operating Humidity: 35 - 85% non-condensing

Certifications

Safety: UL, cUL, CE
FCC: Class B (Industrial, Business or Home)
EMC: IEC CE
RoHS, WEEE Compliant

Driver Support: Windows®, OPOS and JPOS for Linux
